

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

A Bryological Memorial Meeting at Columbus, Ohio.

Columbus was the home for many years of William S. Sullivant and Leo Lesquereux, two names which will always awaken love and reverence from all students of North American mosses and hepatics. It is twenty-six years since Sullivant died, and this last quarter of the century has seen a marked extension of the limits of bryological study and a large increase in the number of students. It seems a fitting time and place to take a survey of the field, review the past and make plans for the future, hence it is proposed to make the coming meeting of the American Association for the Advancement of Science, which is to be held at Columbus, the occasion for a Memorial Day in honor of the Nestors in American Bryology and to call on all botanists and botanical journals to help make the occasion a memorable success. It is proposed to present a series of papers, illustrated by photographs, specimens and microscopical exhibits under the following topics: Historical papers and collections illustrating the bryological work of Hedwig, Palisot de Beauvois, Michaux, Muhlenberg, Bridel, Torrey, Drummond, Hooker and Wilson, Greville, Sullivant and Lesquereux, James and Watson, Austin, Ravenel, Wolle, Bolander, Eaton and Faxon, and Müller. Supplementing these there will be shown collections of specimens, macroscopic and microscopic, illustrating the monographic work of recent American students.

If foreign students who have worked on North American bryophytes can be persuaded to coöperate with us, the following will be asked to contribute: Bescherelle, Brotherus, Cardot, Dixon, Kindberg, Mitten, Pearson, Röhl, Stephani, and Warnstorf.

An effort will be made to secure the loan of type specimens and illustrations from the following sources: Academy of Natural Sciences of Philadelphia, Academy of Sciences of New York, Columbia University, Geological and Natural History Survey of Canada, Harvard University, National Museum, Ohio State University, University of Wisconsin, and Yale University, as well as from private herbaria and collections. It is also requested that any portraits, autograph letters and type specimens and drawings

of special interest be loaned for the occasion, as well as presentation copies of books and pamphlets.

The following committee of organization will gladly answer any questions and give assistance to those wishing to contribute:

Mrs. N. L. Britton, New York Botanical Garden.

Professor W. A. Kellerman, Ohio State University.

Dr. George G. Kennedy, Readville, Mass.

Professor Charles R. Barnes, University of Chicago.

Professor Lucien M. Underwood, Columbia University.
